(57) Abstract :

Title: Spiral Pineapple Cutter A spiral pineapple cutter configured to perform peeling of pineapple skin, wherein the eyes of the pineapple are simultaneously removed by effecting spiral cuts alongside peeling of the outer skin, wherein said pattern of pineapple cutting reduces wastage of pulp by 10-15% is disclosed. The pineapple to be peeled is placed in an inverted manner on the holder pin (4), wherein on pulling the lever (3), the blade holder (7) starts to move in the downward direction, wherein it also rotates simultaneously, therein providing a spiral motion to the blades (11), wherein said movement of the blades effects the peeling cut on the pineapple. The blades will contract or remain in the expanded position depending upon whether the lock (12) was connected or disconnected. FIG.1
